

# PFEDK Rn Diagnostic Tool Kit

Item #: 95916

Variant : 120V 1~ 60Hz

## Description

Due to varying sub slab soil conditions and building size, determining the exact negative pressure required for the job has always been a challenge. Not knowing exact sub slab pressure drop characteristic, radon mitigation becomes art not a science.

Pressure Field Extension Diagnostic Kit, or PFEDK, as the name implies is a tool that can help radon mitigators accurately sizing any sub-slab depressurization application up to 4.4" Static. No more guessing or "poking and hoping" that the past experience would work.

### It's a science, use it to your advantage

- Measure, analyse and select the right fan the first time
- Confidently...

## Technical parameters

Nominal data	
Voltage (nominal)	120 V
Frequency	60 Hz
Phase(s)	1~
Dimensions and weights	
Weight	33.7 lb
